WF Professor To Conduct Workshop

Dr. William E. Cage, assistant professor of economics at Wake Forest University, will conduct a workshop for economics professors today and Saturday at the Triangle Universities Computer Center in the Research Triangle Park.

Cage will explain and demonstrate computer programs which he has developed to teach economics.

The workshop in economics and one in accounting are for the Visiting Lecturer Series sponsored by the N.C. Educational Computing Service. More than 70 teachers from 44 North Carolina colleges will attend.

Cage has written a computerized simulation of the national economy. Students working with this model can see the effects of government policies on the economy, change the policies and study the different results. Another of his programs lets students study the effects of supply and demand on individual goods and prices.
